Deformed charmed hypernuclei

Thursday 12 October 2023 12:30 (30 minutes)

Charmed Λ_c hypernuclei are investigated in the framework of the deformed Skyrme-Hartree-Fock approach. Their ground-state bulk properties, single-particle energy levels, potential energy curves, as well as the existence limit of charmed hypernuclei are studied, with particular regard to the effects of deformation. Λ_c p states are found to be strongly bound, in particular in deformed nuclei.
