

RNA structural ensembles from energy landscape explorations

Dr Konstantin Röder

Randall Centre for Cell & Molecular Biophysics
School of Basic and Medical Biosciences
Faculty of Life Sciences and Medicine

The importance of non-coding RNAs

Non-coding RNA **regulates** many **important processes**, e.g. in transcription or translation. Despite their centrality in regulation, ncRNAs are **underutilised** as **drug targets**.

RNA polymorphism

Energy landscape
explorations

7SK RNA HP1
hairpin

Further case
studies

Pseudoknots and a
look ahead

- 1 potential completely rewritten and available as stand-alone library
- 2 improved terms for base stacking and pairing and implementation of phosphate - nucleobase interactions
- 3 new parameter optimisation including partially-unfolded and excited structures
- 4 all input can be created from pdb file or sequence

HiRE - a new look (available soon)

RNA structures
from ELs
